

PepperDash Portal

The PepperDash Portal™ is an AV operations platform that enables you to accurately define audiovisual standards organization-wide, efficiently deploy them across the globe, and intelligently manage them in real-time.

Comprehensive Standards

Portal provides a simple, structured way to organize and store all of the files and information required to define a comprehensive technology standard for your audiovisual systems.

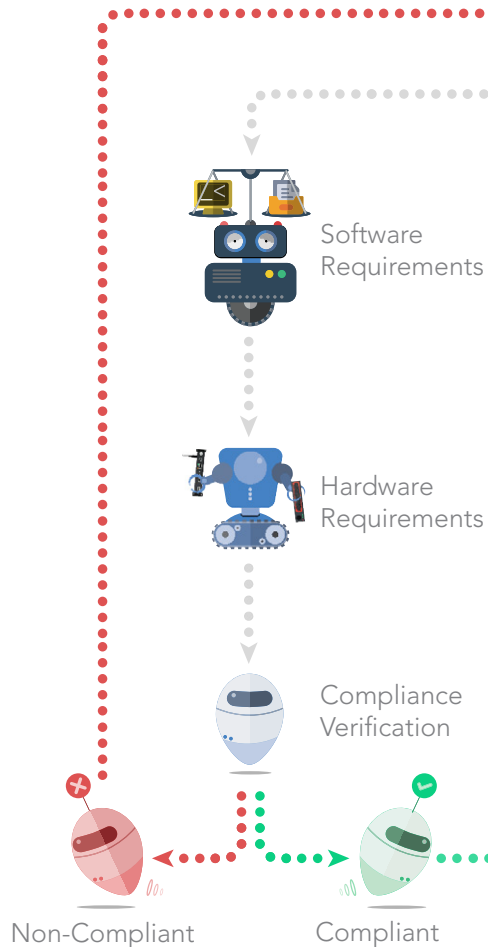

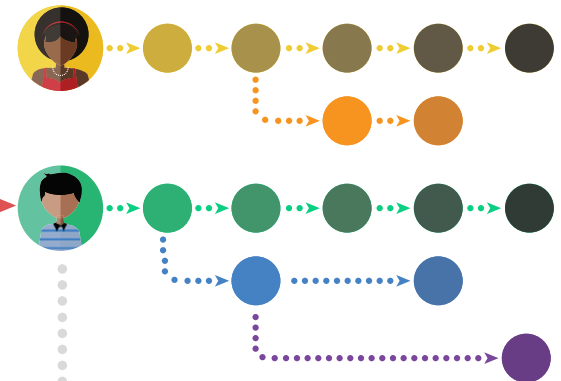

Share Data with Project Teams

A safe and secure way to share all of the necessary information required for systems integrators, consultants, software providers, and internal team members to work together.

Advanced Process Management

Process management is critical to scale any operation. The Portal allows you to clearly define your expected outcomes while providing the ability to track and report on all of the steps required to get there.

Process Definitions

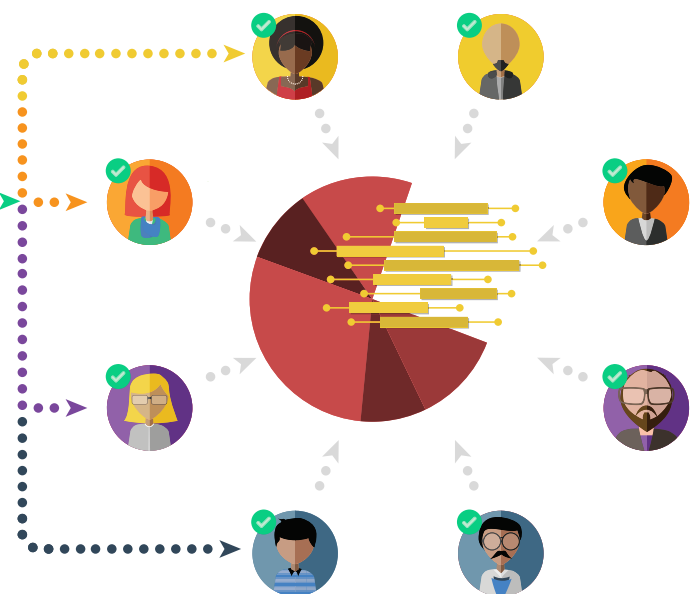

Automated Compliance Verification

Reduce deployment and support time by automating the compliance verification process for control software, firmware, and device configurations.

Data Analysis and Insights

The Portal provides the data analysis tools to intelligently manage your systems and effectively respond to potential security vulnerabilities.
