

AV CONTROLS ~~DON'T~~ WORK ON THE CISCO NAVIGATOR

For too long, teams who rely on Cisco Navigators have had to choose between confusing users with a second touch panel or confusing them with a disorienting application switch.

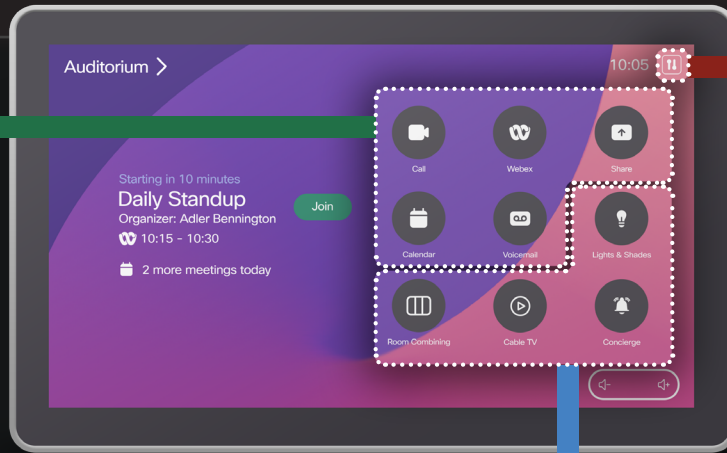

We fixed this.

PepperDash has developed an HTML5 web app that runs on the Navigator, and matches the native experience.

No secondary touch panel.
No confusing app switch.

Custom Web App Running on Microsoft Teams Rooms

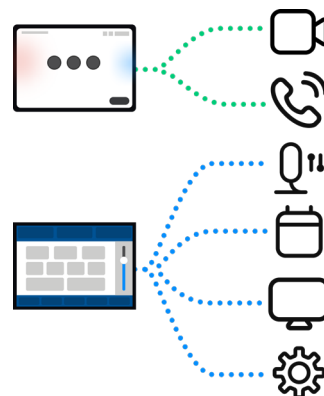

THE NAVIGATOR PROBLEM

The Cisco Navigator has become a popular solution for controlling conference calls. Though the Navigator provides a good experience when it comes to controlling calls, it does not provide all of the AV controls that users need to operate the room.

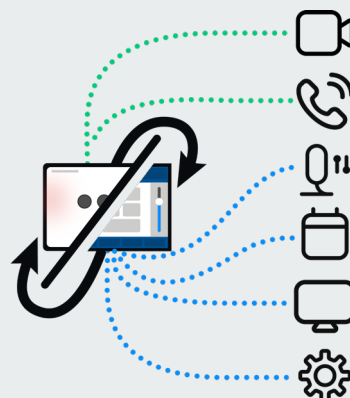

MULTIPLE TOUCH PANELS

Some organizations try to solve this issue by using two touch panels—one for call controls and another for AV controls. This approach fails because users neither understand nor anticipate the need for multiple panels, leading to confusion and frustration.

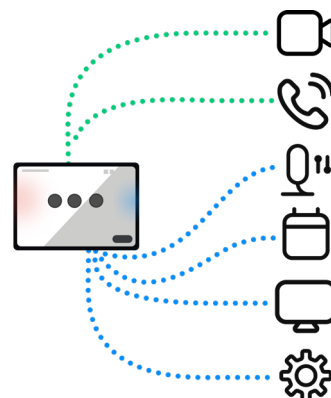

APPLICATION SWITCHING

Other organizations require users to switch between the native app, and a completely different web app on the Navigator. While this eliminates the need for a second panel, the discontinuity that results from the app switch disorients and frustrates users.

UNIFIED EXPERIENCE

PepperDash used Cisco's open-source Momentum UI Kit to create a seamless, unified experience. We integrate with the native UI to call contextual controls so users don't even notice they are switching between applications. This expands the capabilities of the Navigator, eliminates the need for a second touch panel, and reduces frustration.

PepperDash®

Simplify AV Operations

PepperDash Portal is an innovative SaaS solution that brings real-time device management, asset & inventory tracking, and advanced standards compliance to the same easy-to-use online platform.

Flexible Branding and Workflows

Flexible, brandable, feature-packed signage for your scheduling system. Break free from standard scheduling panels with custom workflows, user authentication, and configurable event-based branding.

Premier Custom Solutions

PepperDash continually provides best-in-class programming, AVUX Consulting, and Field Engineering services. We partner with you to build the most capable, scalable, and reliable solutions in the industry.
